

CLINICAL AUDIOLOGY REPORT

Patient Name: Rahul Singh

Date: August 08, 2024

Visit: 6 Month Follow-up

DOB: 05/20/1979 (45 years old)

MRN: 987654321

REASON FOR VISIT:

Six-month follow-up audiogram to assess hearing aid benefit.

AUDIOGRAM RESULTS:

Left Ear (Air Conduction):

500 Hz: 45 dB HL

1000 Hz: 52 dB HL

2000 Hz: 58 dB HL

4000 Hz: 63 dB HL

8000 Hz: 68 dB HL

Right Ear (Air Conduction):

500 Hz: 42 dB HL

1000 Hz: 50 dB HL

2000 Hz: 55 dB HL

4000 Hz: 60 dB HL

8000 Hz: 65 dB HL

SPEECH TESTING:

SRT (Speech Reception Threshold): 45 dB HL bilaterally

WRS (Word Recognition Score): 82% at 65 dB HL

CLINICAL IMPRESSION:

Moderate bilateral sensorineural hearing loss

Tinnitus reported bilaterally

High-frequency hearing loss pattern consistent with noise exposure

RECOMMENDATIONS:

- Continue hearing aid use

- Annual audiogram monitoring

- Hearing protection/counseling provided
